

FNP Sales Analysis Dashboard

Project Overview

The **FNP Sales Analysis Dashboard** is an interactive dashboard developed using **Microsoft Excel** to analyze and visualize sales performance. The dashboard transforms raw sales data into meaningful insights using Excel's data analysis and visualization capabilities. It enables users to monitor key business metrics, identify sales trends, evaluate product performance, and make data-driven decisions.

The dashboard is fully interactive, allowing users to filter data by occasions, order dates, and delivery dates for detailed business analysis.

Project Objective

The primary objective of this project is to:

- Analyze overall sales performance.
- Track revenue and order trends.
- Identify the highest-performing occasions, products, and categories.
- Monitor customer spending behavior.
- Analyze regional sales distribution.
- Measure delivery performance.
- Provide an easy-to-understand dashboard for business decision-makers.

Key Performance Indicators (KPIs)

The dashboard provides four important business metrics:

KPI	Value	Description
Total Revenue	₹3,975,424	Total revenue generated from all orders
Total Orders	1,000	Total number of customer orders
Average Customer Spend	₹3,975.42	Average amount spent per order/customer
Average Delivery Time	5.53 Days	Average number of days taken for order delivery

These KPIs provide a quick overview of the company's sales performance.

Dashboard Components

1. Occasion-wise Revenue Analysis

Displays revenue generated during different occasions such as:

- Anniversary
- Birthday
- Diwali
- Holi
- Raksha Bandhan

- Valentine's Day

Business Insight: Anniversary and Holi generate higher revenue compared to other occasions, helping identify peak sales events.

2. Category-wise Revenue Analysis

Analyzes revenue across different product categories, including:

- Cake
- Colors
- Mugs
- Plants
- Raksha Bandhan Gifts
- Soft Toys
- Sweets

Business Insight: The "Colors" category contributes the highest revenue, while categories like Mugs generate comparatively lower sales.

3. Top 10 Cities by Orders

Displays the cities with the highest order volume.

Business Insight: Certain cities contribute significantly more orders, helping businesses identify strong regional markets and improve marketing and logistics planning.

4. Monthly Revenue Trend

Visualizes revenue across all months of the year.

Business Insight: Revenue shows seasonal fluctuations, with higher sales during specific months, helping management forecast demand and plan promotional campaigns.

5. Top 5 Products by Revenue

Highlights the products generating the highest revenue.

Business Insight: A few top-performing products contribute a significant share of overall revenue, enabling better inventory management and promotional strategies.

6. Revenue by Order Time

Shows customer purchasing patterns throughout the day.

Business Insight: Orders peak during certain hours, helping businesses determine the most effective times for marketing campaigns and customer engagement.

Interactive Features

The dashboard includes dynamic filters (Slicers) for:

- Occasion
- Order Date
- Delivery Date

These filters allow users to instantly analyze sales data for specific occasions or time periods without modifying the source data.

Business Benefits

This dashboard helps stakeholders to:

- Monitor overall sales performance.
 - Identify high-performing occasions and product categories.
 - Analyze customer purchasing trends.
 - Compare monthly sales performance.
 - Improve inventory planning.
 - Optimize delivery performance.
 - Support data-driven business decisions.
-

Tools & Features Used

This project was developed entirely in **Microsoft Excel** using:

- Microsoft Excel
 - Pivot Tables
 - Pivot Charts
 - Slicers
 - Timeline Filters
 - Excel Formulas (SUM, COUNT, AVERAGE, etc.)
 - Data Cleaning & Formatting
 - Conditional Formatting
 - Dashboard Design & Layout
-

Key Insights

- Total revenue generated is **₹39.75 Lakhs**.
 - A total of **1,000 orders** were processed.
 - The average customer spends approximately **₹3,975** per order.
 - Average order delivery time is **5.53 days**.
 - Anniversary is one of the highest revenue-generating occasions.
 - Colors is the best-performing product category.
 - Sales vary across months, indicating seasonal demand.
 - A small number of products contribute significantly to total revenue.
 - Certain cities generate a higher number of customer orders.
 - Customer order activity is concentrated during specific hours of the day.
-

Conclusion

The **FNP Sales Analysis Dashboard** demonstrates how **Microsoft Excel** can be used as a powerful business intelligence tool to transform raw sales data into actionable insights. By leveraging Pivot Tables, Pivot Charts, Slicers, Timeline Filters, and Excel formulas, the dashboard provides an interactive and user-friendly interface for analyzing sales performance, customer behavior, product trends, and delivery efficiency. This project showcases strong skills in **Excel dashboard development, data analysis, data visualization, KPI reporting, and business reporting**, making it an excellent portfolio project for a **Data Analyst** role.
